

Fremont County Airport

60298 Hwy. 50 Penrose, CO 81240

Office: (719) 784-3816

Planning and Engineering Request for Qualifications

Addendum 1

Are there any planning projects currently programmed?

We currently do not have any federal or state planning projects planned in the next 5 years. However, there may be local hangar developments.

Will the table of contents and proof of insurance pages count towards the page limits of the RFQs?

The cover page, table of contents and insurance pages will not count towards the page limits.

Can we visit the airport?

Yes. Please schedule a date and time in advance by email at wes.brandt@fremontcountyco.gov or call the office number at 719-784-3816.

In the Planning RFQ Section 3.B.2, could you please confirm if soils investigations and the preparation of as-built plans will be required special services under the planning on-call? These services are typically associated with engineering.

We understand that it may be rare for these services to be associated with planning projects, but there is a chance they may be needed.

In the Planning RFQ Section 6.6, we noticed item number six "requested demonstrated capability to meet schedules/deadlines without delays, cost escalations, overruns, or contractor claims". These are items that would apply to engineering, but do not apply to planning. Should this section still be included in the Planning SOQ?

Yes. Please include this section in the Planning SOQ.

We noticed that under the scope of work section in the planning RFP, Hangar Developments was listed as an anticipated project. Would this also be an anticipated engineering project?

We require hangar developers to provide their own engineering for their projects. We currently do not anticipate developing our own hangars.
