CUP Exhibit 3.9 Noxious Weed Control Plan

FREMONT COUNTY WEED MANAGEMENT

201 N 6th St, Room 118
Cañon City, CO 81212
719-276-7317
brittany.pierce@fremontco.com

Integrated Weed Management Plan

Project Name: Ranch Land Pit #1/Red Creek Major Mod DATE 09/28/2020

Address (or location of property): Sections 24 & 25 of T20S, R68W, Fremont County, CO

List of Noxious Weeds and Control Plan:

Table with 1 column and 1 row containing text about Noxious Weeds Present Control Measures, Reference to Guideline for Weed Management Plans April 2015, and descriptions of List A, B, and C species.

Identification and treatment can be conducted through Fremont County Weed Management or a recommended partnering agency. Please see Fremont County Weed Control's booklet, "Guideline for Weed Management Plans" for more details such as herbicide rates and specifics about weed control methods.

Fremont County Weed Management is operated by Qualified Licensed Applicators under the Department of Agriculture. Any management or treatment involving chemical treatment should be carried out as indicated on the label. The label is the law. Any information on management planning or about receiving cost share that is available to the public, can be discussed with the department to confirm eligibility.

*These weed species receive priority for cost share funding.

Other Required Action: The vicinity of the proposed planning area is a known location for noxious weed infestations of tamarisk (salt cedar), Russian olive, Canada thistle and hoary cress species. Other noxious species could present themselves on site during any point of time and should also be addressed as stated in the Control Plan. In the event any 'List A' or large populations of 'List B' species are observed, a site visit would be recommended during peak growing season to discuss further management plans. In order to do this, please consider all factors in choosing a time (such as weather, presence of actively growing plants, and operation plans or activities). Any additional questions or concerns in completing this management plan please contact Fremont County Weed Management to discuss available options. (719-276-7317)

CUP Exhibit 3.11 Roadway Impact Analysis Form

**Fremont County Department of Planning and Zoning
Roadway Impact Analysis Form**

This form shall be used in conjunction with any applications submitted in accordance with Section 8 of the Fremont County Zoning Resolution and or Section VI of the Fremont County Subdivision Regulations. This form is considered a minimum application submittal item and shall be required to be provided at the time of application submittal. This form is intended to provide the minimum items that must be addressed in the roadway impact analysis. The form can be expanded or attachments can be made to further address the roadway impact of the proposed use. **If the estimated average daily traffic increase is less than thirty (30) vehicle trips per day (one trip to be considered as a single or one-direction vehicle movement with either the origin or the destination [exiting or entering] inside the subject property) as per the Institute of Transportation Engineers, Trip Generation Handbook, Second Edition or subsequent editions for the entire development, as estimated by the project engineer, then a Roadway Impact Analysis will not be required to be completed by an engineer. In such situations other minimum items shall be addressed by the applicant.**

1. Project Name Red Creek Quarry formerly Ranch Land Rock Pit #1 CUP 02-3

2. Type of application:

- | | |
|--|--|
| <input type="checkbox"/> Zone Change #1 | <input type="checkbox"/> Special Review Use Permit |
| <input type="checkbox"/> Zone Change #2 – Use Designation Plan | <input checked="" type="checkbox"/> Conditional Use Permit |

| <input type="checkbox"/> Expansion of an existing Business or Industrial Use | |

3. Engineer: 3 Rocks Engineering Address: 430 Main Street
 City: Canon City State: CO Zip Code: 81212
 Telephone #: (719)430-5333 Facsimile #: () Email ronn@3rocksenengineering.com

4. Provide a detailed description of the proposed use: _____
Red Creek Quarry (RCQ) will be the limestone source for the cement plant when Bear Creek
Quarry is mined out. RCQ will be accessed by an interior Materials Transport and Access
Corridor on private property between the cement plant and RCQ. Mining and equipment will be
consistent with Holcim's current operation.

5. Provide the estimated average daily traffic to be generated by the proposed use(s), using the Institute of Transportation Engineers, Trip Generation Handbook, Second Edition or subsequent editions. The estimated volumes of traffic to be generated by the proposed use(s) shall include as a minimum, the average weekday traffic volume and the peak-hour (*morning and afternoon*) traffic volumes. Specify the number of trips in each category. **(one trip to be considered as a single or one-direction vehicle movement with either the origin or the destination [exiting or entering] inside the subject property)** **No new daily traffic will be generated.**
 Residential: 0 daily, _____ peak-hour am, _____ peak-hour pm _____
 Employee: 0 daily, _____ peak-hour am, _____ peak-hour pm _____

Red Creek Quarry is a new limestone source that will be operated by Holcim; by Holcim employees . No new traffic trips will be generated by this project as personnel from Bear Creek Quarry will operate Red Creek Quarry. All personnel and equipment will use the plant access on Hwy 120.

Customer: 0 daily, _____ peak-hour am, _____ peak-hour pm

Truck generated by the proposed use: 0 daily, _____ peak-hour am, _____ peak-hour pm

Delivery – required by the use: 0 daily, _____ peak-hour am, _____ peak-hour pm

Total Vehicle Trips: 0 daily, _____ peak-hour am, _____ peak-hour pm

I certify that based on the proposed use(s) the total vehicle trips using the Institute of Transportation Engineers, Trip Generation Handbook, Second Edition or subsequent editions will average less than thirty (30) trips per day based on any fourteen (14) day time frame.

Seal

Colorado Licensed Professional Engineer

If the above has been certified, then the applicant can complete the form and acknowledge that the information completed by the applicant only the questions marked by asterisk (*) are required to be answered.

NOTE: If the additional information provided warrants improvements to the roadway system, even though the traffic generated by the proposed use is less than thirty (30) trips per day, such improvements will be required. If in the future the use exceeds an average of thirty (30) trips per day a complete analysis could be required.

6. *What is the general location of the subject property? _____
Sections 24 and 25, T20S, R68W of the 6th Principal Meridian in Fremont County CO.

7. *What are the names and/or the numbers of the public roadways that serve the site? _____
CO Hwy 120

Provide a site plan drawing that shows the subject property, its proposed access points and all public roadways within a one-half (1/2) mile radius of the subject property, marked as Exhibit 7.1. An exhibit has been attached.

8. *What is the classification, according to the Fremont County Master Plan, of the roadway from which the project site will gain access to the public transportation system?
 Expressway or Freeway --- Major Arterial --- Arterial --- Collector --- Local

9. *Do the roadways in question lie within a three (3) mile radius of any incorporated town or city limits or the boundary of another County? Yes --- No
If yes, provide the name(s) of the jurisdiction(s): City of Florence
In addition if a new roadway is to be constructed, how will it comply with the transportation plan in effect for the municipality? _____

10. *Will this project require a Fremont County Driveway Access Permit or a Colorado Department of Transportation (CDOT) State Highway Access Permit? Yes --- No
Please explain: _____

11. *Will the project require construction of, or improvement to any roadway maintained by the CDOT?
 Yes --- No
If yes, will the proposed construction or improvement be in compliance with CDOT's "5 Year Transportation Plan"? Yes --- No Please Explain _____

Has CDOT required that the applicant provide a traffic study? Yes --- No
If yes, a copy of the study shall be attached to this application, marked as Exhibit 11.1. An exhibit has been attached.

12. *Will the project require construction of, or improvement to any roadway currently maintained or proposed to be maintained by the County? Yes --- No
If yes, what would be the social, economic, land use, safety and environmental impacts and effects of the new roadway on the existing transportation system and neighborhood? _____

13. *Are any roadways proposed to be vacated or closed in conjunction with the proposed project?
Yes --- No
If yes, please explain. _____

14. *Is the proposed project site adjacent to or viewable from any portion of the Gold Belt Tour Scenic Byway or other scenic corridor designated by the Master Plan? Yes --- No
If yes, identify the byway and or scenic corridor: _____
If yes, explain how the scenic quality will be affected by the proposed project. _____

If yes, what measures will be taken to not have a negative impact on the byway and or scenic corridor? _____

15. *Will the proposed project gain access to the public transportation system via 3rd, 9th, K and or R Streets in the Penrose-Beaver Park Area of the County? Yes --- No

16. *Does the subject property have frontage on a public roadway? Yes --- No
If answered no, then documentation evidencing a "right of access" to the subject property for the proposed use shall be attached marked as Exhibit 16.1. An exhibit has been attached. If answered no, then please explain what the right of access consists of: Holcim secured an access corridor during the purchase of the limestone resource.

17. *What is the right-of-way width of the public roadway(s) that serve the site? 100 ft.

18. *What is the surface type of the public roadway(s) that serve the site? Concrete and asphalt

19. *What is the surface width of the public roadway(s) that serve the site? 40 ft

20. *What are the existing drainage facilities for the public roadway(s) that serve the site? Culverts and bar ditches

21. *Does the public roadway(s) that serves the site have curb and gutter? Yes --- No
If answered yes, what is the type of curb and gutter? _____

22. *Does the public roadway(s) that serves the site have adjacent sidewalks or other pedestrian ways?
 Yes --- No
If answered yes, what is the width(s) and surface type(s)? _____

23. *How many access points will the subject property have to public roadways? One

24. *Will the proposed roadways that access the public roadways intersect the public roadways other than at perpendicular? Yes --- No
If answered yes, please explain: _____

25. *What are the sight distances, in all directions, from the subject property access point(s) along the public roadway that serves the site? (*mark and provide distance for each that is applicable*)
 Northerly, site distance: _____ Southerly, site distance: _____
 Easterly, site distance: 400 ft. Westerly, site distance: 1000 ft.

26. *What are the distances from the subject property access point(s), in all directions, to the nearest intersection with another public roadway along the public roadway that serves the site? (*mark and provide distance for each that is applicable*)
 Northerly, distance: _____ Southerly, distance: _____
 Easterly, distance: 3.75 miles Westerly, distance: 2200 ft

27. *What are the distances from the subject property access point(s), in all directions, to the nearest driveway(s) along the public roadway that serves the site? (*mark and provide distance for each that is applicable*)
 Northerly, distance: _____ Southerly, distance: _____
 Easterly, distance: _____ Westerly, distance: 1000 ft

28. *What are the distances from the subject property access point(s), in all directions, to the nearest blind curve(s) along the public roadway that serves the site? (*mark and provide distance for each that is applicable*)
 Northerly, distance: _____ Southerly, distance: _____
 Easterly, distance: 400 ft. Westerly, distance: 1000 ft

29. *What are the distances from the subject property access point(s), in all directions, to the nearest blind hill(s) along the public roadway that serves the site? (*mark and provide distance for each that is applicable*)

Northerly, distance: _____ Southerly, distance: _____
 Easterly, distance: 400 ft Westerly, distance: _____

30. *Identify any and all hazardous conditions with regard to the public roadway(s) that provide access to the subject property in the general area of the subject property: No hazardous conditions
exist regarding this public road access.

If the public roadway(s) that currently serve the subject property have any hazardous conditions, then recommendations shall be made for improvements that will decrease the hazardous conditions on the public roadway(s): _____

31. *Explain what effect the proposed use will have on the existing traffic in the neighborhood. If no change is expected, please explain why no change is expected: No change is expected to traffic
in the neighborhood. Please refer to the comment in the top margin of Page 2 of this form

32. *Will the proposed use, due to the increase in traffic or the type of vehicle traffic generated by the proposed use, change the level and or type of required maintenance for the public roadway(s) that serve the site? Yes --- No, (*please explain*) NA

If the proposed use, due to the increase in traffic or the type of vehicle traffic generated by the proposed use, changes the level and or type of required maintenance for the public roadway(s) that serve the site, then recommendations shall be made that would lessen the maintenance impact for the entity in control of maintenance of the public roadway(s): _____

Note: If improvements are required, it may be mandatory that such improvement be installed prior to final approval of the application.

33. *Are new roadways proposed to be constructed, on or off site, in association with the proposed project? Yes --- No If yes, provide evidence that the roadways will be constructed to conform to natural contours in order to minimize soil disturbance, cut and fills, protect drainageways and not create to unstable slopes. The interior Material Transport and Access Corridor will be
constructed according to guidance from DRMS, CPW, ACE and MSHA.

34. Provide an analysis of the existing traffic volumes on the adjacent roadway system, including the average weekday traffic (*vehicles per day*) and the weekday peak-hour traffic (*vehicles per hour – am and pm*), showing the dates and times of traffic counts or source utilized for traffic volume counts. Determine the existing level of service or percentage of roadway capacity currently in use.

Roadway name or # _____ average weekday traffic _____
 Weekday peak-hour traffic _____ am _____ dates _____ times
 Weekday peak-hour traffic _____ pm _____ dates _____ times
 Current level of service - % of roadway in use _____

Roadway name or # _____ average weekday traffic _____
 Weekday peak-hour traffic _____ am _____ dates _____ times
 Weekday peak-hour traffic _____ pm _____ dates _____ times
 Current level of service / % of roadway in use _____

Roadway name or # _____ average weekday traffic _____
 Weekday peak-hour traffic _____ am _____ dates _____ times
 Weekday peak-hour traffic _____ pm _____ dates _____ times
 Current level of service / % of roadway in use _____

35. Provide an estimate of the probable traffic directional distribution from and to the subject property based on the proposed use(s) and assignment of the estimated traffic volumes to the adjacent roadway network. Estimate the future background and resulting total traffic volumes (*including the estimated generated traffic due to the proposed use*) on the adjacent roadway system for a twenty (20) year design period, showing volumes for both left and right turn movements as well as through traffic.

36. Determine the projected future levels of service or percentage of roadway capacity to be in use at the subject property's access points and key adjacent intersections. Provide recommendations for street and access improvements if any portions of the roadways do not have the capacity to accept the additional estimated traffic volumes. All necessary improvements will be required to be designed, completed and accepted by the County prior to any final action regarding the application.

37. Please provide any additional information considered by the Certifying Engineer to be pertinent to the roadway impact in association with the proposed project: _____

I hereby certify that the foregoing information was prepared by myself or under my direct supervision and is true and correct to the best of my knowledge and belief.

Colorado Licensed Professional Engineer Date _____ SEAL

If not completed by an Engineer, then the following acknowledgement shall be signed by the applicant and/or owner.

By signing this Application, the Applicant, or the agent/representative acting with due authorization on behalf of the Applicant, hereby certifies that all information contained in the application and any attachments to the Application, is true and correct to the best of Applicant's knowledge and belief.

Applicant understands that any required private or public improvements imposed as a contingency for approval of the application may be required as a part of the approval process.

Fremont County hereby advises Applicant that if any material information contained herein is determined to be misleading, inaccurate or false, the Board of Commissioners may take any and all reasonable and appropriate steps to declare actions of the Board regarding the Application to be null and void.

Signing this Application is a declaration by the Applicant to conform to all plans, drawings, and commitments submitted with or contained within this Application, provided that the same is in conformance with the Fremont County Zoning Resolution.

CUP Exhibit 3.13 Master Plan Compliance

The subject property is located in the Plains Planning District of the 2015 Fremont County Master Plan.

Objectives

F1. The proposed mining is will be conducted to be protective of water quality and wildlife habitat. The subject parcels are surrounded by Ranch Land LLC, substantially isolated from recreators with the exception of hunters with permission to be on the private land.

F1.1 Holcim has conducted groundwater and surface water baseline quality and quantity characterization investigations. Water monitoring will continue throughout the life of the mine with DRMS.

F1.2 Holcim obtained input from CO DWR, and US ACE while preparing the CO DRMS application. Agency recommendations are incorporated into the DRMS 112 permit application.

F1.3 Brown and Caldwell prepared a stormwater drainage report for the project and it is included in the county application.

F1.4 Brown and Caldwell performed a wildlife investigation/survey of the mine area. CPW visited the site and prepared recommendations that were incorporated in the DRMS 112 permit application.

F1.5 Development will not occur within the flood hazard area of the Arkansas River.

F2. The proposed mining is a long term limestone resource for Holcim. Reclamation will return the mined area to rangeland for cattle and wildlife habitat that will maintain the rural character.

CUP Exhibit 3.14 Surrounding Land Use Compatibility

The Ranch Land LLC ranch includes two areas currently permitted for mining. Mining and cattle ranching are the principal land uses on the ranch.

Legal Description of Materials Transport and Access Corridor:

A Parcel of land located in parts of Sections 20, 21, 28 and 29, Township 19 South, Range 68 West of the Sixth Principal Meridian, County of Fremont, State of Colorado, more particularly described as follows:
 Beginning at a point on the North line of the Southeast Quarter of said Section 20, and considering said North line to bear N89° 09' 19"E, with all bearings herein relative thereto, and from which the Southwest corner of said Section 20 bears S62° 00' 36" West a distance of 5805.37 feet;
 Thence N13° 22' 46"W a distance of 284.95 feet;
 Thence N76° 37' 14"E a distance of 273.19 feet;
 Thence S13° 22' 46"E a distance of 346.36 feet to said North line of the Southeast Quarter of said Section 20;
 Thence continuing S13° 22' 46"E a distance of 3928.22 feet to a point from which the Northwest Corner of said Section 28 bears N40° 59' 05"W a distance of 1538.33 feet;
 Thence N89° 41' 57"W a distance of 281.17 feet;
 Thence N13° 22' 46"W a distance of 3923.14 feet to the Point of Beginning,

And A strip of land located within Section 28, the Northeast one-quarter of the Northeast one-quarter of Section 33, Section 34, T19S, R68W of the 6th P.M. and Section 3, Section 10, the Southwest one-quarter of Section 14, the East one-half of Section 15 and the North one-half of Section 23, T20S, R68W of the 6th P.M., County of Fremont, State of Colorado and being more particularly described as lying 125.00 feet on each side of the following described centerline.

Beginning at point within said Section 28 from which the Northwest corner of Section 28 bears N36°48'18"W, a distance of 1449.43 feet; thence S27°05'30"E, a distance of 113.81 feet to a point at the beginning of a curve to the left, said curve having a radius of 5682.00 feet, a central angle of 16°50'42" and a chord bearing of S 35°30'51"E; thence along said curve, Southeasterly an arc distance of 1670.52 feet; thence S 43° 56'12"E, a distance of 5704.94 feet to a point at the beginning of a curve to the left, said curve having a radius of 3875.50 feet; a central angle of 07°22'29" and a chord bearing of S 47°37'27"E; thence along said curve, Southeasterly an arc distance of 498.84 feet; thence S 51°18'41"E, a distance of 850.39 feet to a point at the beginning of a curve to the right, said curve having a radius of 5017.00 feet; a central angle of 61°48'57" and a chord bearing of S20°24'13"E; thence along said curve Southeasterly an arc distance of 5412.78 feet to a point at the beginning of a curve to the right, said curve having a radius of 12013.00 feet, a central angle of 02°55'07" and a chord bearing of S 11°57'49"W; thence along said curve Southwesterly an arc distance of 611.94 feet; thence S 13°25'22"W, a distance of 1182.22 feet to a point at the beginning of a curve to the left, said curve having a radius of 7160.00 feet; a central angle of 13°07'12" and a chord bearing of S06°51'46"W; thence along said curve Southerly an arc distance of 1639.55 feet; thence S 00°18'10"W, a distance of 1167.38 feet, to a point at the beginning of a curve to the left, said curve having a radius of 4943.00 feet; a central angle of 08°58'53" and a chord bearing of S 04°11'16"E; thence along said curve Southerly an arc distance of 774.84 feet; thence S 08°40'43"E, a distance of 2273.99 feet to a point at the beginning of a curve to the left, said curve having a radius of 5030.00 feet; a central angle of 23°12'03" and a chord bearing of S20°16'44"E; thence along said curve Southeasterly an arc distance of 2036.81 feet; thence S 31°52'46"E, a distance of 2080.29 feet to a point at the beginning of a curve to the left, said curve having a radius of 5100.00 feet; a central angle of 20°42'32" and a chord bearing of S 42°14'02"E; thence along said curve Southeasterly an arc distance of 1843.33 feet; thence S 52°35'18"E, a distance of 5789.81 feet to a point on the East line of the Northeast one quarter of Section 23, T20S, R68W, 6th P.M., from which point the Northeast corner of said Section 23 bears N00°05'49"W, a distance 2341.06 feet, said point being the Point of Terminus of this description.

Containing 219.60 acres of land, more or less.

Legal Description of Red Creek Quarry:

Section 24 and Section 25, T20S, R68W of the 5th P.M., County of Fremont, State of Colorado. Said parcel contains 1,271.7 acres, more or less.

NOTATIONS

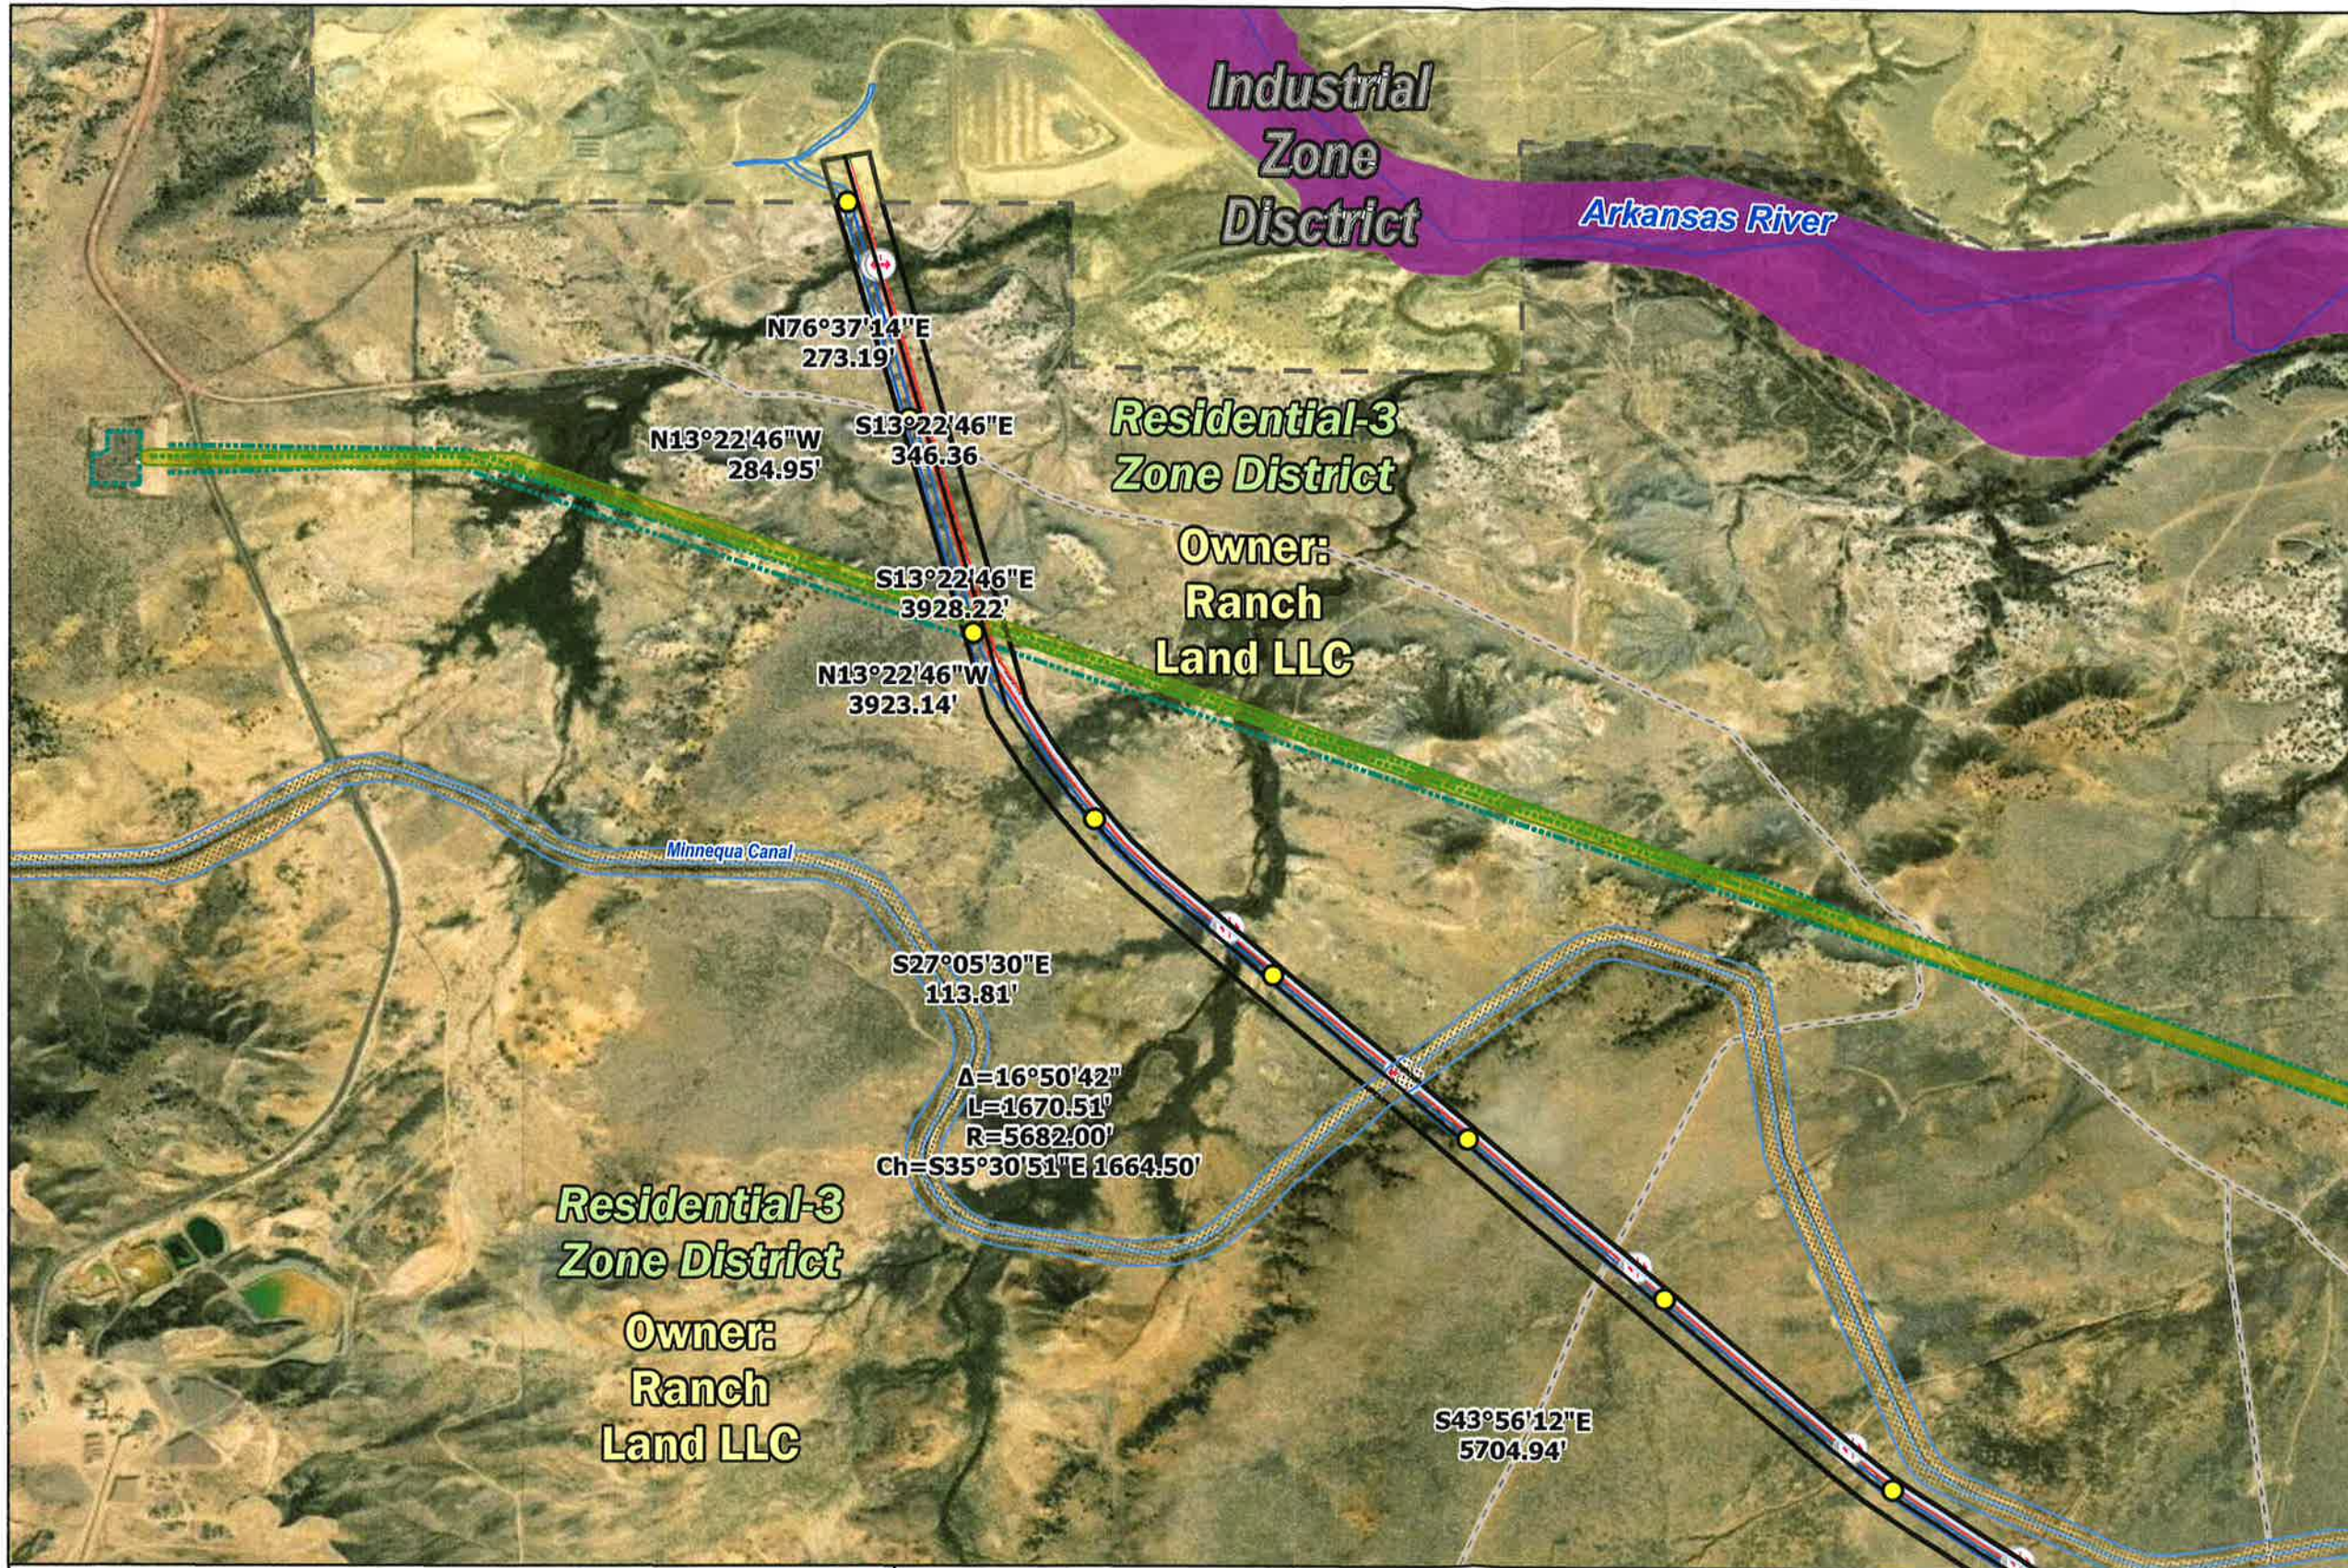

- Item g - Acreage of subject property is 1,492 acres.
- Item l - The parcel does not contain existing structures. All structures are proposed.
- Item o - Typical parking space dimensions for standard pick-up truck 9 feet by 30 feet
 Typical parking space dimensions for large equipment 12 feet by 32 feet
- Item p - The proposed use does not require designated loading areas
- Item q - The proposed use will rely on the existing access from State Hwy 120, the Holcim plant main entrance
- Item r - The proposed use does not have designated pedestrian areas or walkways
- Item t - See FIRM maps in the Drainage Plan Attachment C
- Item u - Lighting for parking lot and building height 16 feet and LED downcast lighting. Lights on secondary crusher 44 feet height and LED downcast lighting. Lights will be installed along on the conveyor and MTAC every 1 mile.
- Item v - DRMS and MSHA signage will be 4 feet by 3 feet and will be posted at south end of the MTAC on west side of the Section 24
- Item z - There are no designated open spaces on the subject property

	Minimum Lot Size	Maximum Lot Coverage	Maximum Building Height	Minimum Lot Width	Minimum Front Setback	Minimum Rear Setback	Minimum Side Setback
Residential 3	18 acres	7%	45 ft.	500 ft.	75 ft.	50 ft.	50 ft.
Proposed	1492 acres	<0.000002%	45 ft.	25 ft.	8,332 ft.	2,086 ft.	393 ft.

OFFICE OF THE SECRETARY OF STATE
OF THE STATE OF COLORADO

CERTIFICATE OF FACT OF GOOD STANDING

I, Jena Griswold, as the Secretary of State of the State of Colorado, hereby certify that,
according to the records of this office,

HOLCIM (US) INC.

is an entity formed or registered under the law of Delaware, has complied with all
applicable requirements of this office, and is in good standing with this office. This entity has
been assigned entity identification number 19901009684.

This certificate reflects facts established or disclosed by documents delivered to this office on
paper through 04/29/2024 that have been posted, and by documents delivered to this office
electronically through 05/01/2024 @ 14:05:42.

I have affixed hereto the Great Seal of the State of Colorado and duly generated, executed, and issued this
official certificate at Denver, Colorado on 05/01/2024 @ 14:05:42 in accordance with applicable law.
This certificate is assigned Confirmation Number 15999493.

Jena Griswold

Secretary of State of the State of Colorado

*****End of Certificate*****

Notice: A certificate issued electronically from the Colorado Secretary of State's website is fully and immediately valid and effective. However, as an option, the issuance and validity of a certificate obtained electronically may be established by visiting the Validate a Certificate page of the Secretary of State's website, <https://www.coloradosos.gov/biz/CertificateSearchCriteria.do> entering the certificate's confirmation number displayed on the certificate, and following the instructions displayed. Confirming the issuance of a certificate is merely optional and is not necessary to the valid and effective issuance of a certificate. For more information, visit our website, <https://www.coloradosos.gov> click "Businesses, trademarks, trade names" and select "Frequently Asked Questions."

CUP Exhibit 3.29 DRMS Reclamation Plan

CUP Exhibit 3.29 Reclamation Plan

CO DRMS 112 Permit Exhibit E: Reclamation Plan (Rule 6.4.5)

Section 2.5

Post-mining land use will be rangeland, consistent with post-mining land use of BCQ. Rangeland will blend successfully with the vicinity land uses and post-mining land uses of the area mines. In addition, rangeland is suitable for the challenges of semi-arid high desert conditions of the area. Reclamation will improve available forage for cattle.

This reclamation plan is in addition to the reclamation plans for BCQ and the Plant Area that were approved by the Division in the original BCQ application (M-1977-344) and AM-01. Due to the extensive life of RCQ, 100 years, Holcim intends to initially post bond for Sections 24 and 25 in Fremont County or approximately 30 years of quarry material. The bond will include reclamation for the conveyor and conveyor service road, quarry infrastructure and approximately 1000 acres of limestone and sandstone mining disturbance. The access road from the plant to RCQ and the Hwy 96 access road will not be reclaimed. At approximately year 20, Holcim will notify DRMS that a bond estimate for reclamation of anticipated disturbance in the subsequent 1000 acres will be forthcoming. Holcim will adjust the bond as appropriate in response to DRMS inspection, comments and recommendations. Bonding adjustments will continue in like manner for the life of the mine.

All natural material above the translime geologic layer will be salvaged. Native plant growth material ranges in thickness from 0 inches where limestone outcrops to eight inches deep. The plant growth material will be segregated from the overburden and stockpiled along the perimeter in berms approximately 10 feet high and 100 feet inside the permit boundary. All overburden above the translime layer will be salvaged for use in construction of the perimeter berm and final reclamation. The perimeter berms will be seeded with a temporary seed mix to stabilize the surface. Stockpiling will continue until approximately Year 20 when contemporaneous reclamation will commence.

Reclamation will occur contemporaneously with mining after Year 20 and continue in like manner through the life of the mine. At the end of mining, all reclamation will be completed within two years. Reclamation will include sloping benches, backfilling the sandstone pit and bringing up the elevation of the mine floor. An abundance of overburden exists to the extent that the lowest two benches will be completely backfilled thus raising the elevation of the mine floor .

Two distinct reclamation efforts will be implemented to reclaim RCQ. The mined out area will be reclaimed beginning in Year 20 using stockpiled overburden and plant growth material using traditional equipment. At the end of the life of the mine, RCQ infrastructure including buildings, conveyor corridor and utilities will be demolished, and footprint reclaimed.

Because of the 100-year life of the mine and ever-changing costs of reclamation tasks, Holcim suggests a phase bonding approach. Holcim proposes submitting a bond for the conveyor and access corridor, Sections 24 and 25 in Parcel 3, and the access to Hwy 96. This area will be developed and mined for 20 to 30 years. After Year 20, Holcim will review the bond to progress into Pueblo County sections for subsequent years.

2.5.1 Reclamation of Material Extraction Areas

Reclamation of mined out sections of the mine will begin by rebuilding slopes using the salvaged overburden. A mined out area will be marked by up to 4 benches or 140 feet of highwall. Haul trucks will transport the stockpiled overburden to the toe of the benches. Bulldozers will push the overburden into

the bench forming slopes 3H:1V or gentler (Figures 2.5.1-1). Excess overburden after rebuilding slopes will be used to elevate the pit floor.

When the slopes are stable and the pit floor is at a suitable elevation, the area will be prepared for seeding. The rebuilt slopes and pit floor will be graded with a motor grader and compacted. The topsoil will be loaded into haul trucks with a loader and distributed over the graded areas to a depth ranging from 4 to 6 inches.

Figure 2.5.1-1 Cross-section of benched highwall and final reclamation slope 3H:1V

While distributing the plant growth material, erosion furrows will be contoured into the bench slopes to mitigate erosion. The furrows will be contoured parallel to the edge of the bench and approximately midway between the edge of the bench to the highwall. Erosion furrows are preferred to straw wattles since they can remain after reclamation vegetation takes hold. This increases precipitation infiltration time for the new and ultimately established vegetation.

Seeding will occur either in the fall or spring with the seed mix presented in Table 2.5.1-1. This seed mix was approved by DRMS in the AM-01 for BCQ. Seed will be broadcast at the rate of 111.5 pounds of live seed per acre, mulched with certified weed free straw, two tons per acre, and tracked into place with a dozer. Fertilizer was not recommended by NRCS. A noxious weed program will utilize chemical weed control if noxious weeds start establishing in the affected land areas that are not controlled by mowing.

Table 2.5.1-1 NRCS Reclamation Seed Mix

Species	Variety	Required PLS* Rate/Acre	% of Species in Mixture	PLS Seeding Rate Per Species/Acre
Sideoats gramma	Niner, El Reno	18.0	20	3.6
Crested Wheatgrass	Hycrest	10.0	20	2.0
Indian Ricegrass	Nezpar	12.5	15	1.9
Mammoth Wildrye	Volga	30.0	20	6.0
Alkali Sacaton	None specified	3.0	10	0.3
Streambank Wheatgrass	Sodar	22.0	10	2.2
Alfalfa	Ladak	16.0	5	0.8
		111.5 PLS/Acre		

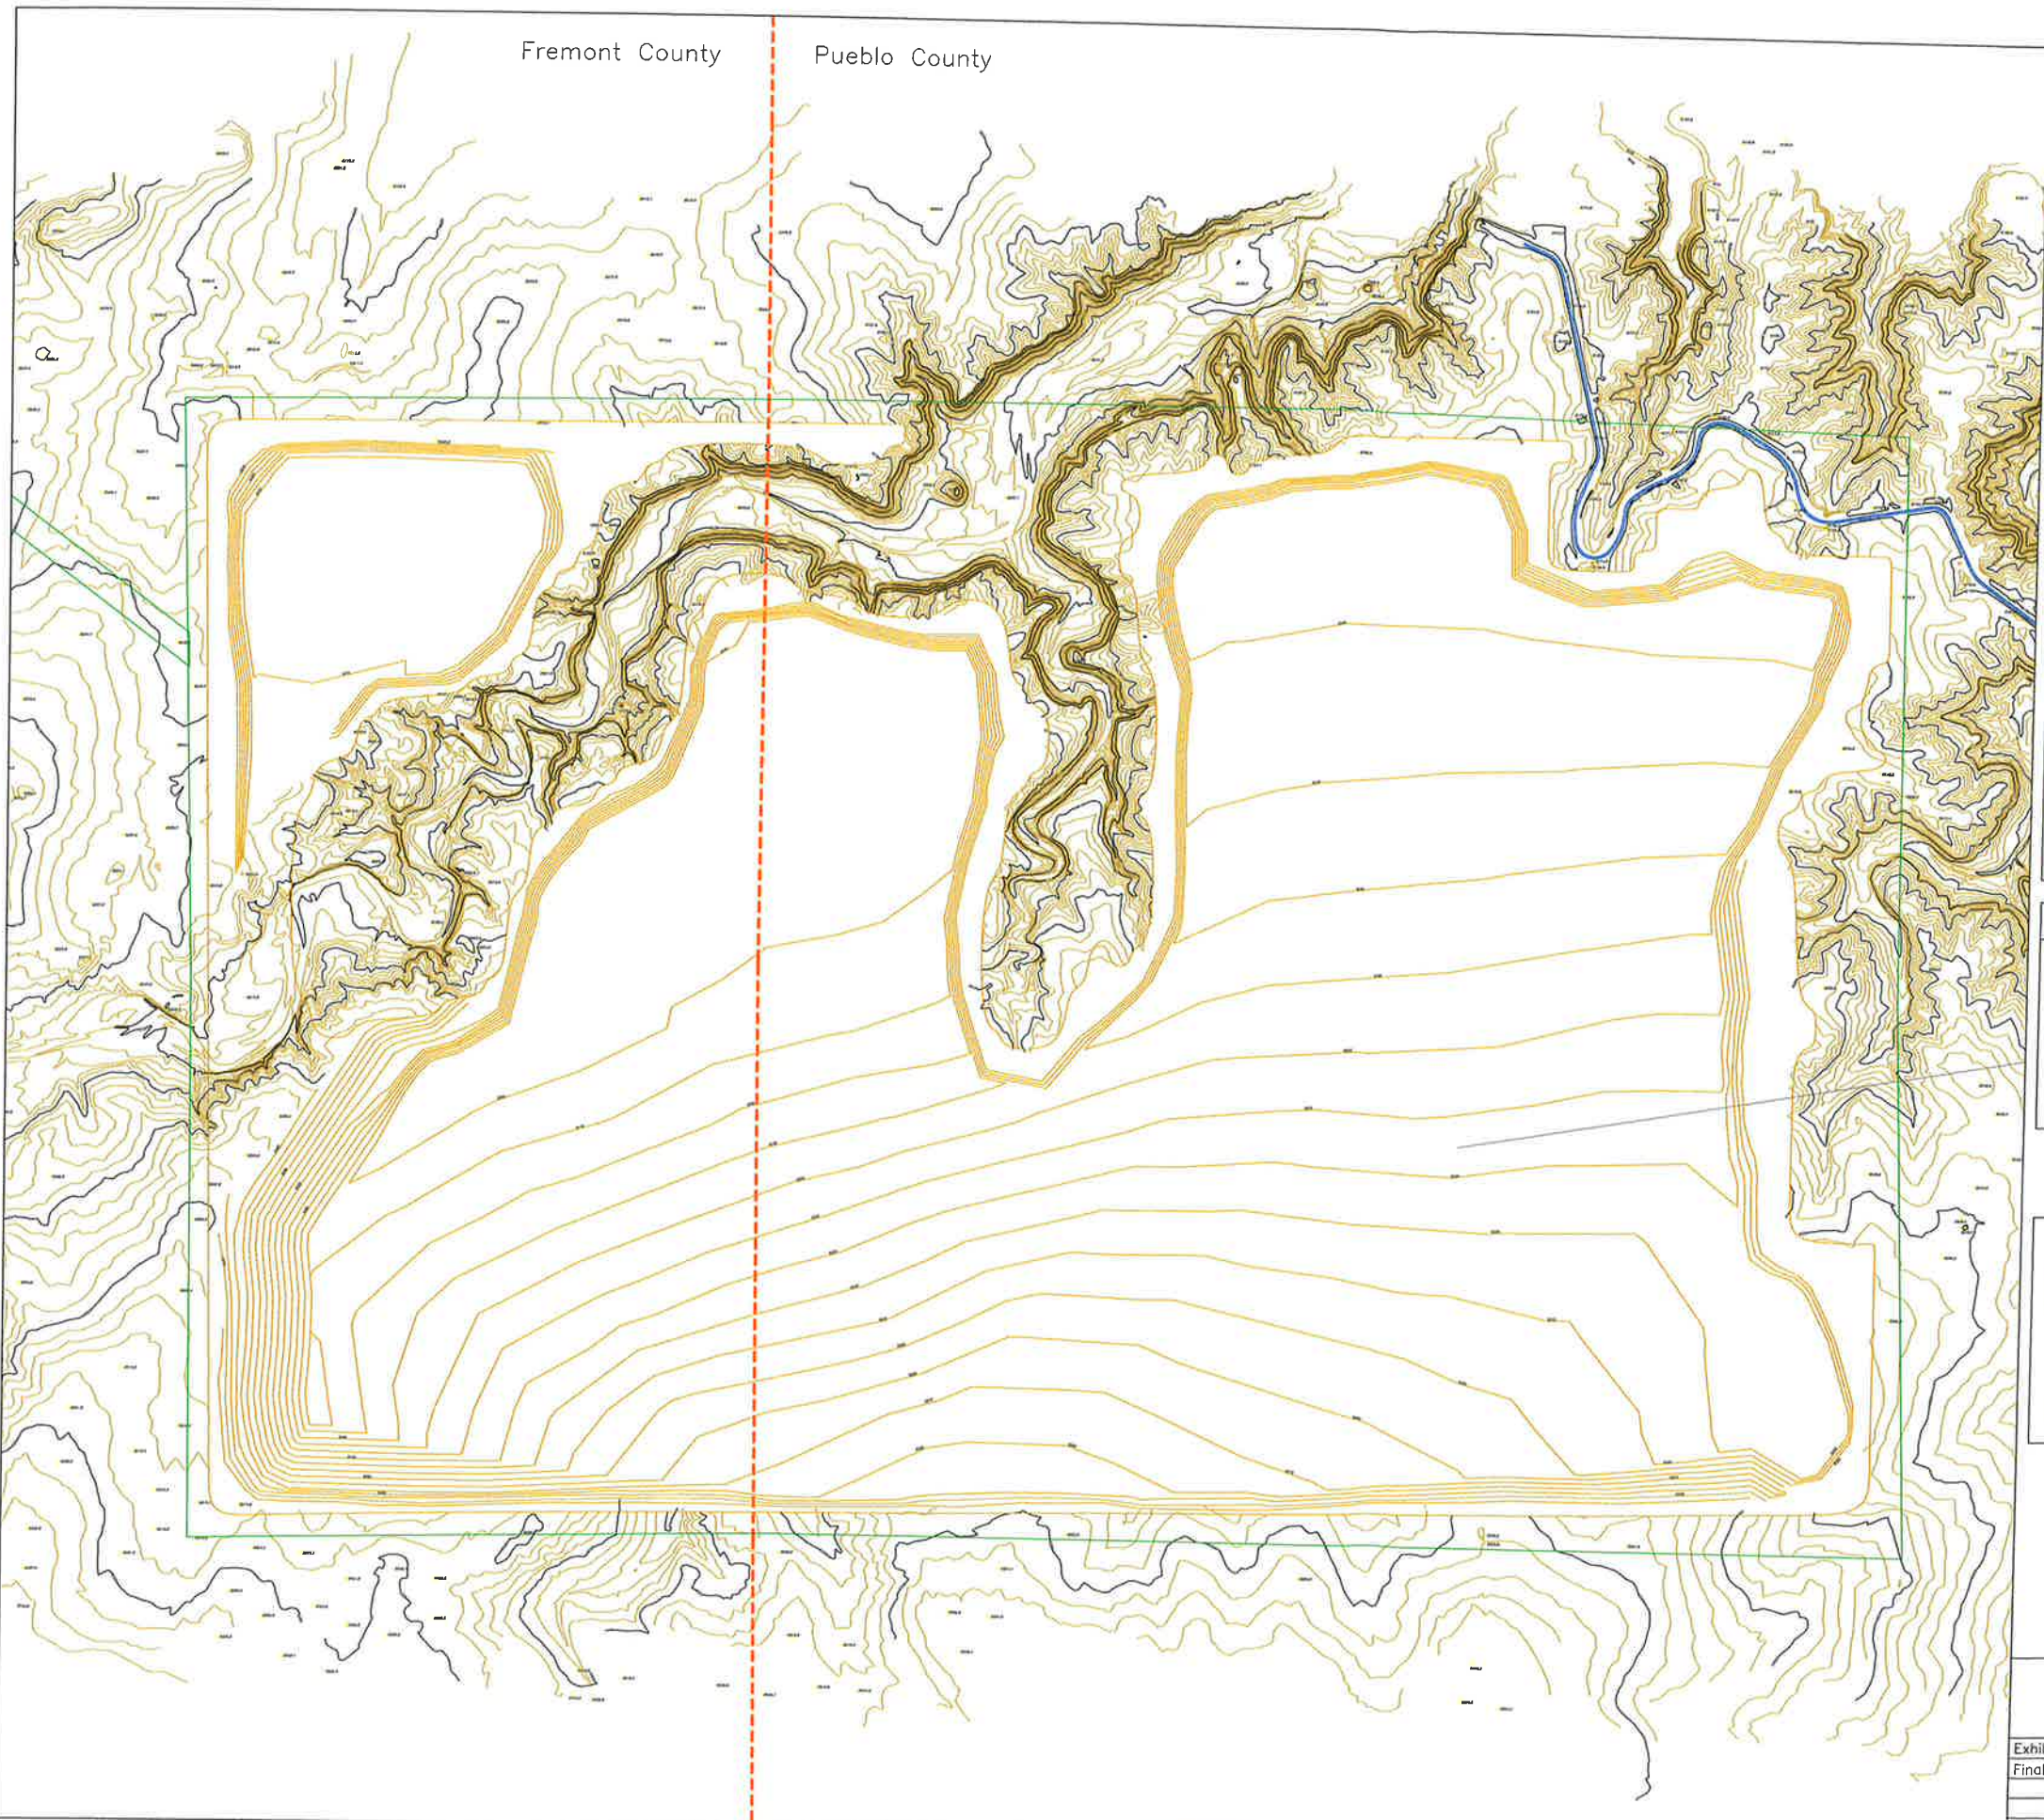

*PLS – Pounds live seed per acre

2.5.2 Reclamation of Mine Infrastructure

Once mining ceases, all infrastructure including conveyor system, buildings, and utility infrastructure will be removed from the permit area. The metal buildings will be disassembled and scrapped to a metal recycler. Utility lines will be excavated and electricity distribution poles removed. The septic vault will be drained, excavated and placed in the concrete scrap stockpile. The conveyor will be disassembled; either sold, transported to another Holcim quarry or scrapped. The crushers and screens will be sold or transported to another Holcim quarry. Concrete structures such as conveyor supports, building slabs, septic vault, etc. will be stockpiled and eventually crushed and used as backfill in final slope rebuilding.

The infrastructure footprint including parking lots, buildings pads and conveyor support pads will be ripped with an excavator or loader equipped with a claw. The ground will be ripped to a depth of 1 foot, then graded and contoured with a motor grader. Seed bed preparation and seeding will proceed as described above.
