Ensure employees are cleaning under all shelving and cleaning spills in an appropriate time frame.
Produce display- siding is coming apart.
Coving around equipment/aisles are damaged and warped.

General Comments and Notes

No priority or priority foundation items observed.

High temperature dish machine adequately sanitizing at 167 degrees.
Adequate quat sanitizer measured, 200ppm.

Store is doing a slight remodel. Where aisles have been removed, the floor is severely damaged and is in the process of being replaced.
FCDPHE received a complaint about the store floor, this is not a foodborne illness risk factor, but the store should be aware of these complaints. The floor is old and discolored. During the last routine inspection in march, I was told the flooring would be replaced, it seems that is no longer the case. Broken tiles are replaced one at a time as needed. Strongly suggest that Safeway considers replacing the flooring to a more durable and cleanable material.
